🫁

🫁 Respiratory Diseases Mind Map

🫁 **Respiratory Diseases** — A Comprehensive Overview
Understanding anatomy, conditions, diagnosis, treatment, and the healthcare landscape

1️⃣ Anatomy

▼ Upper Respiratory Tract

- Nose & Nasal Cavity
  - Pharynx
  - Larynx

▼ Lower Respiratory Tract

- Trachea
  - Bronchi & Bronchioles
  - Lungs
  - Alveoli

▼ Supporting Structures

- Diaphragm
  - Intercostal Muscles
  - Pleura

2️⃣ Medical Conditions

- **Asthma**
  - **COPD**
  - **Lung Cancer**
  - **Pneumonia**
  - **Tuberculosis**
  - **Pulmonary Fibrosis**
  - **ARDS**
  - **Sleep Apnea**

3️⃣ Types of Diseases

- **Obstructive:** Asthma, COPD
  - **Restrictive:** Pulmonary fibrosis, ARDS
  - **Infectious:** TB, Pneumonia, Influenza
  - **Environmental/Occupational:** Asbestosis, Coal worker

pneumoconiosis
• **Genetic:** Cystic fibrosis

4 Symptoms

⚠️ Key Warning Signs

- Dyspnea (Shortness of breath)
  • Chronic cough
  • Wheezing
  • Chest tightness
  • Hemoptysis (blood in sputum)
  • Fatigue
  • Cyanosis

5 Causes

🚬 Risk Factors

- Smoking/Vaping
  • Air Pollution
  • Allergens
  • Genetic mutations
  • Occupational hazards (dust, chemicals)
  • Infections (bacterial/viral/fungal)

6 Diagnosis 🔬

Clinical Tests

- Physical Examination
  • Spirometry
  • ABG (Arterial Blood Gas)
  • Allergy Testing

Imaging

- Chest X-ray
  • CT Scan
  • Bronchoscopy

Specialized

- Sleep Study (Polysomnography)

7 Treatment 💊

▼ Lifestyle Changes

- Quit smoking
  • Pollution avoidance
  • Environmental modifications

▼ Medications

- **Bronchodilators** — Open airways
  - **Steroids** — Reduce inflammation
  - **Antibiotics/Antivirals** — Fight infections

▼ Advanced Therapies

- Oxygen Therapy
  - CPAP for sleep apnea
  - Surgery: Lung transplant, tumor removal

8️⃣ Prognosis 📊

- Depends on disease type
  - Early diagnosis improves outcomes
  - Chronic conditions require lifelong management
  - Severe COPD, lung cancer → poor long-term survival

9️⃣ Rehabilitation 🏃

Pulmonary Rehabilitation Programs:

- Breathing exercises
- Physical conditioning
- Nutritional support
- Lifestyle coaching
- Yoga/Pranayama
- Home-based respiratory exercises

🔟 Devices & Technology

🔬 **Modern Respiratory Healthcare Technology**

Standard Devices

- Oxygen concentrators
- Inhalers & Nebulizers
- Ventilators
- CPAP/BiPAP machines
- Pulse Oximeter
- Wearable lung monitors (AI based)

Notable Startups 🚀

- **Aether Biomedical** — respiratory telemonitoring
- **Monaghan Medical** — smart inhalers
- **ZEPHYRx** — wireless spirometry
- **HEALAir** — portable nebulization
- **OxiWear India** — wearable O_2 tracking

1️⃣1️⃣ Competitive Landscape 🏢

Global Leaders
- Philips Respironics
- Medtronic
- ResMed
- Fischer & Paykel

Major Players
- GE Healthcare
- Dräger
- Boehringer Ingelheim (inhalers)
- Cipla (respiratory medication India)

12 Market Study 📈

💹 **Global Respiratory Device Market**
Growing due to pollution, smoking & aging population
CAGR: ~6–8% (steady growth)

Key Trends:
- Strong adoption of **AI monitoring**
- **Remote care** solutions
- **Portable home-care devices**

13 Problems Faced ⚠️

🚨 **Critical Healthcare Challenges**

Access & Awareness
- Late diagnosis
- Limited access to respiratory care in rural areas
- Limited awareness about early symptoms

Treatment Barriers
- High cost of long-term treatment
- Device compliance issues (patients misuse inhalers)
- Air quality crisis worsening disease burden
